CATALOGUE AND PRICE LIST

OF AWNINGS, TENTS, COVERS and other Goods Manufactured by the ANCHOR SUPPLY COMPANY

IN this Catalogue we aim to give explicit directions to our Agents, Hardware and Furniture Dealers, Plumbers and all other parties who are now handling or contemplate handling our line of goods.

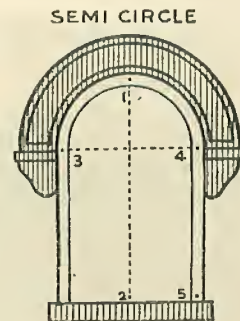

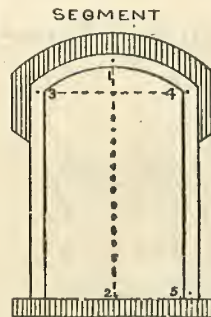

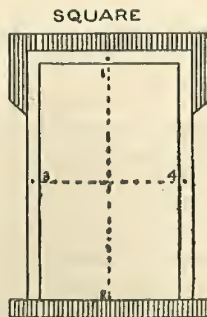

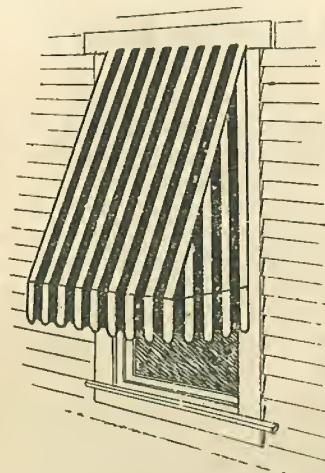

Our facilities for turning out First-class Work are better than ever before, having larger floor space and more machinery, which enables us to take care of the largest order promptly.

Prices quoted are subject to discount.

We will always be pleased to quote Net Prices upon application.

Very truly,

ANCHOR SUPPLY COMPANY.

ALL STYLES OF
Window and Door Awnings
FOR OFFICES, RESIDENCES, HOTELS, Etc.

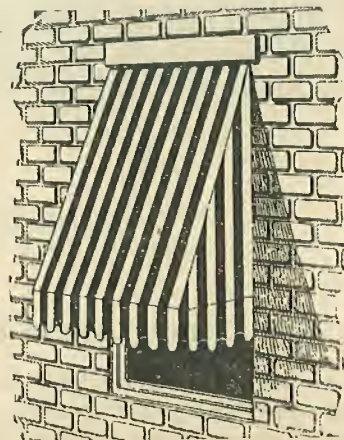

Directions for Measuring

All awnings are made so that bottom of scalloped curtain comes to within 16 inches of sill, unless otherwise ordered, or in case of very high windows we expect you to state how far from sill awning is to come.

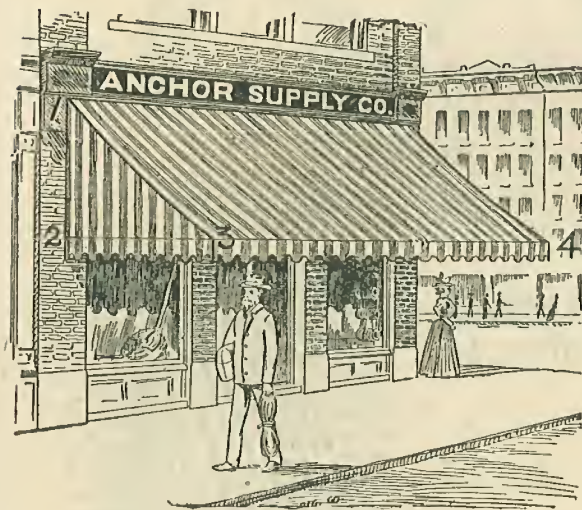

In measuring for window and door awnings, always measure from center to center of wood casing, not on brick work, and in all cases give name of shape of top of window, as per our diagram. Always state if awnings are for first story or upper stories of building. If for first story give height from sill of window or door to ground, and state if you want awning high enough so that you can walk under it.

When screens are to be used on doors, the awnings should be measured same as store awnings, from 1 to 2, 2 to 3, 3 to 4. Send for measuring blanks and samples of fancy stripes.

Lowest Prices Quoted on Application.

Directions for Measuring Store Awnings to Pull Up with Ropes

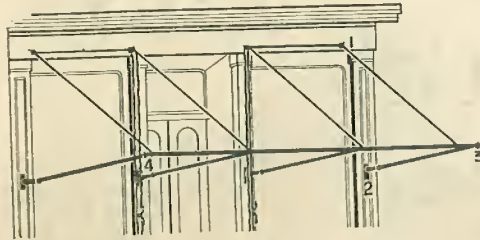

First determine the place where the joints of the frame will be fastened to the building, which should be from 7 to 8 feet from the sidewalk, according to the height of the front (see Figure 2 in diagram.) You will observe that the curtain—15 inches deep—drops below that point, for which you will have to allow in clearing peoples' heads. Then measure from there to where top of awning can be fastened above the window (see Figure 1 in diagram), which will be the distance from 1 to 2, or height of awning; 2 to 3, in a high building, should be the same as 1 and 2, but in a low one a little more. If the distance from 2 to 3 is more than 10 inches longer than the distance from 1 to 2, slide rods must be used. Then measure the width of store from center of column on one side to the same on the other side, which will be the distance from 3 to 4, or width of awning. If the top where the awning is to be attached projects beyond the face of the building or is back of the level, mention how much. When ordering a frame, state whether it is to be fixed in stone, brick, iron or wood, and whether door posts and face of building or outer columns are in line; also whether the frame requires two, three, four or more joints and bars.

DIRECTIONS FOR MEASURING RECOVER FOR OLD FRAMES

Measure from 1 to 2, 2 to 3, 3 to 4, always stating if front rod, or from 3 to 4, is IRON, WOOD or PIPE. If wood give size of pole and state if pocket is wanted, or if awning is to fasten to front bar with screw eyes. If iron or pipe state if you want pocket for frame or if it is to tie to frame through eyelets placed in awnings for that purpose.

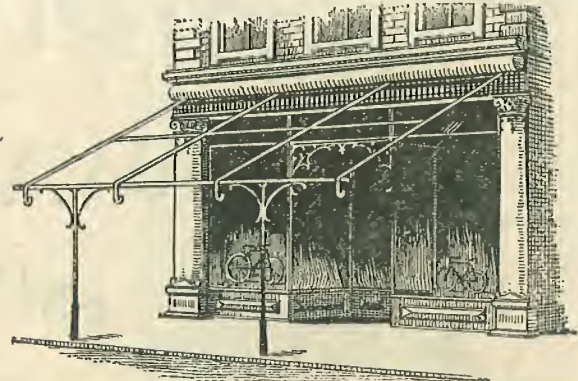

WRITE FOR PRICES AND SAMPLES OF MATERIAL

Directions for Putting Up Store Awnings to Pull Up with Ropes.

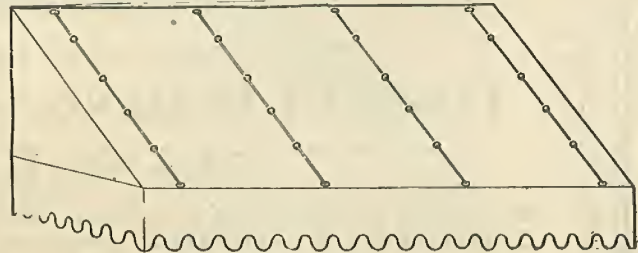

FIRST ascertain the height of the Awning, that is from 1 to 2; measure that distance down the house from Fig. 1 in diagram, which is the place for the joints (see cut No. 2). If the columns are iron, they will have to be bored and tapped and the ends of the joints threaded to screw in; if stone or brick, make holes 3 in. deep and cement firmly; if wood, fasten on with screws. Be careful to have the joints in line, and if any of the columns stand back, put the long joints on them; now fasten the bars to the joints with the joint screws and pass the front rod through the middle ones, and put on both end bars and screw on the nuts. Put up the pulleys as shown in diagram. Pass the ropes through the pulleys, as shown in diagram, one through each center pulley, and attach to front rod, the outside ropes first through the center, then through the outside pulley, and fasten to the front rod, 12 in. from the end. Now take the Awning, and while the frame is in the same position as shown in the diagram, take off the outside nuts, put the ends of the front rod through the large holes in the corners of the Awning and replace the nuts outside the Awning; tie to front rod with a tarred string, then raise it up and fix the top to the front at the proper height from the joints; let it down again and tie the sides to the joints with the tarred string by passing them through the eyelet in the Awning at the side just above the scallop, and it is finished.

ROLLER AWNINGS, For Stationary Frames

These Awnings are used where parties desire to cover entire walk, and can also be used over wood frames. Measure width of building. Distance from where Awning fastens at top to where bottom of Awning is to be when down. State if you have roller. If so, what is the diameter?

Folding Awning with pull up ropes running through rings on top of Awning. This throws the wear on the rings, not on the cloth as in the case where ropes are used underneath the cloth.

ANCHOR COG GEAR ROLLER AWNING

WITH SEPARATE ENDS

As the Awning rolls up,
the ends fold up.

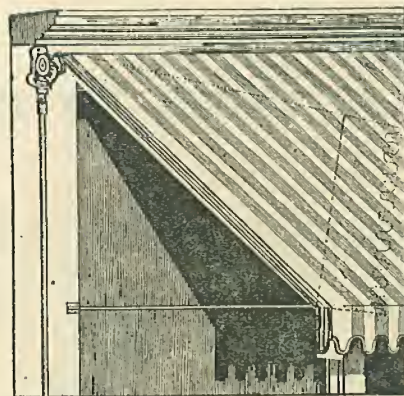

FIG. 1

This cut shows Awning with ends folded under to roll up with Awning.

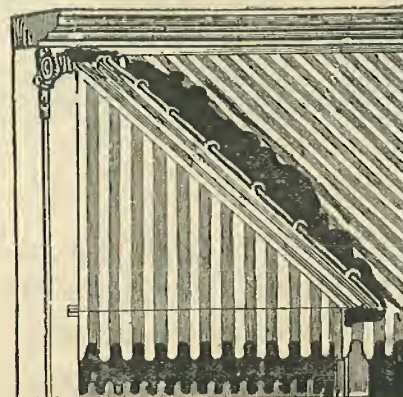

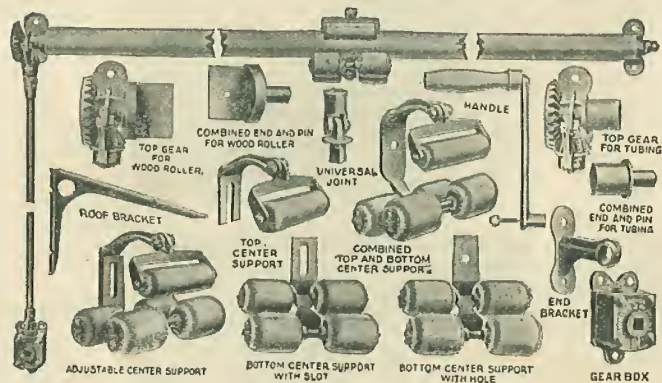

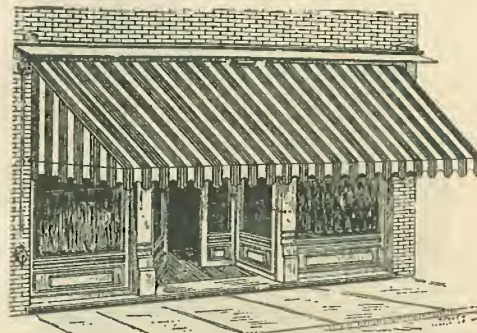

FIG. 2

This cut shows Awning with ends separate. As the Awning rolls up, ends fold up as in an ordinary store Awning.

"ANCHOR" PATENT COG GEAR ROLLER AWNING FIXTURES

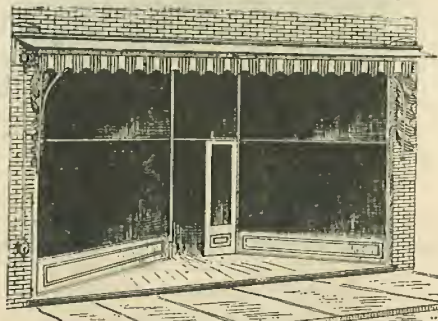

This cut shows all the different parts as used in the "Anchor" Patent Cog Gear Roller Awning Fixtures—Note Anti-Friction Center Support, which does not cut the cloth.

AWNING IN USE

Anchor Cog Gear Roller Awning, showing Fixtures fitted to a $1\frac{1}{2}$ x 8 inch plank, and galvanized roof over the Awning.

AWNING ROLLED UP

The Anchor Patent Cog Gear Roller Awning

With Anti-Friction Center Support

and should the material crimp or wrinkle in rolling or unrolling, our Center Support adjusts itself to the extra thickness of cloth and does not cut it. The large rollers used in our Center Supports allow the long rollers to work easily and as rollers are not cased in, dirt cannot accumulate to clog up the working parts.

Our Self-Locking Gear or Operating Box is always locked. This enables you to set the awning at any angle without any danger of it dropping. The locking device is not exposed and parties not familiar with its construction cannot tamper with the awning. To operate our awning the CRANK must be used. **YOU CANNOT OPERATE IT WITH A WRENCH.** No lock and chain needed. A small lever locks the gear when crank is removed from gear box.

In connection with the above improvements we have our UNIVERSAL JOINT. Nearly all other gears are so constructed as to require an expert to put them up, and even then as a rule are not true and in line, making the awnings hard to roll. This point we overcome with our Universal Joint. If the shaft from the top gear to the operating box should be out of line, by the use of our Universal Joint the Anchor Patent Cog Gear Roller Awning will always roll perfectly free and easy.

Chief among the numerous advantages the Anchor Patent Cog Gear Roller Awning has over all others are, namely:

It rolls up closer to the building, doing away with the baggy appearance and is not liable to be torn to pieces by heavy windstorms.

It does not interfere with the light when rolled up.

It can be set at any angle desired.

It has no ropes to wear the cloth, no chain to break, stretch or rust.

The cloth rolls up smoother than by any other system.

It is always locked and can only be raised or lowered by the use of the crank.

Being absolutely ANTI-FRICTION the cloth will last three to four times longer than other makes.

Whether in line or out of line from the top gear to the operating box we can roll a 100 foot as easily as a 10 foot roller.

With the combined improvements in the ANCHOR PATENT COG GEAR ROLLER AWNING, we can roll twice as fast with one-half the exertion as any other awning.

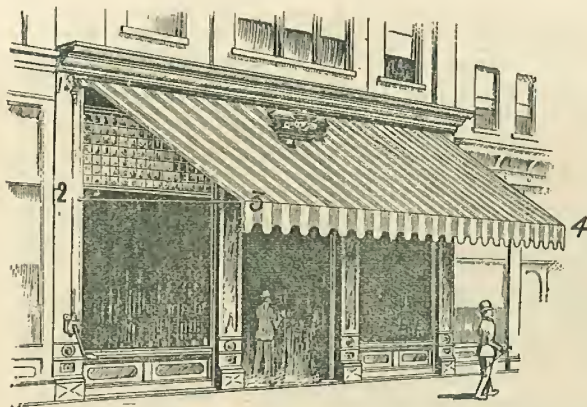

It can be made with end curtains attached to fold under when the awning is rolled up or with independent end curtains folding up as in an ordinary awning.

The fixtures of the Anchor Patent Cog Gear Roller Awning are all made of malleable iron. They are strong, light and durable. When once put on a building they will last a life-time, and are neater in appearance than any now used. The Anchor Cog Gear Roller Awning will be an ornament to your store front and is SUPERIOR to all other roller awnings.

Introduced but a short time ago, it is now used throughout the entire United States and several FOREIGN COUNTRIES and giving universal satisfaction.

Do not confound our Cog Gear with some of the cheap imitations now on the market.

Use the Patent Cog Gear Roller Awning and Your Awning Troubles are Over.

Directions for Measuring a COG GEAR ROLLER AWNING

First determine the place where joints of frame will fasten to the building, which should be from 7 to 8 feet from sidewalk, according to height of front. The curtain, 12 inches deep, drops below that point, for which you will have to allow, for the bottom of curtain should be at least 6 feet 3 inches from sidewalk. Then measure from where frame fastens to the point where awning will fasten above. This gives the distance from 1 to 2. The distance over sidewalk, or from 2 to 3, should be the same as from 1 to 2. If it is longer Slide Rods must be used. See pages 12 and 13. Then give extreme width that awning is to cover. This will be the length of the top roller. But the awning and front rod is always six inches shorter, on account of end journals and working gear of awning, which takes up six inches.

State whether frame requires 4 or more joints and bars, also if in line and whether they fasten into iron, stone, brick or wood.

State if top fastens to brick, iron, stone or wood, also if in line with upright columns. If back, how much. If projects, how much.

State if end curtains are wanted. If only one, which side. (Standing and facing building).

State if ends are to be attached to awning as per (Fig. 1, showing ends) or separate as per (Fig. 2, page 7).

NOTICE—Always state definitely if measure from 3 to 4 is as per diagram, or if it is full length of roller. The operating roller is always 6 inches longer than the awning.

This Price List answers for all ordinary Store Fronts. On all latest improved, new style, wide vestibule, and out of the ordinary style Fronts, we prefer to give *special prices*.

WRITE FOR DISCOUNTS.

Directions for Putting up Cog Gear Roller Awning

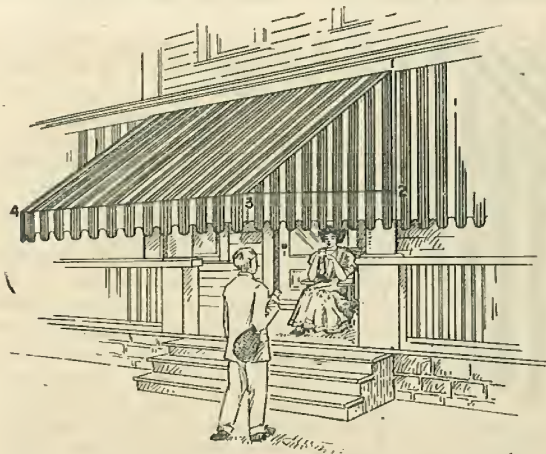

DETERMINE the place where awning is to fasten to building at the extreme right and left ends at the top. On the end of which operating box is to be placed fasten the cog gear for top. On opposite end place the end bracket. The bearings of these two parts must be on a perfect level. After these parts are securely fastened, draw a line from center to center of journal boxes across building; ascertain how many center supports are needed, divide the extreme widths into as many equal parts as there are center supports. The center support consists of top and bottom part, the one with four rollers being bottom part, the one with one wide roller the top part. Place the bottom part in position, allowing space for roller between bottom and top part, which should be from six to eight inches in center, according to size of awning, as a large awning takes up more room on roller than a small one. After bottom part is securely fastened, place the long roller in position and fasten securely at each end. Then tack awning to roller, fastening each end first and dividing the slack canvas equally across front. Place top part of center support in position and the top part of the awning is complete. The lower fastenings are the

same as any ordinary awning. The operating box is generally fastened about three feet from the ground in a line with the top gear. We, however, send with each awning a universal coupling, so it makes no material difference if these two parts are a little out of line. Do not place operating box in position until you have fitted the connecting rods in place, when you can put it exactly where it belongs. After frame is in position, tie the awning to it through eyelets in awning or if wood front bar fasten with screw-eyes or screws, and it is complete.

Where ends are sewed to the body of the awning (as in Fig. 1, which shows ends folded under) we furnish everything necessary for fastening. Where ends are separate (as in Fig. 2) the upper part of end is securely fastened directly under the roller and to the extension rod of frame. We sew rings on inside edge of end curtain and by placing a pulley at the upper inside corner and running a cord through the rings the ends can be folded up very neatly by simply pulling the rope tight.

Directions for Measuring Recover for Old Frames

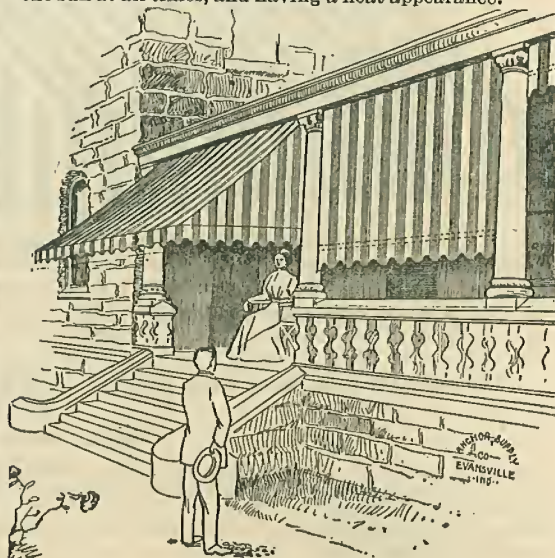

Measure from 1 to 2, 2 to 3, 3 to 4, always stating if front rod, or from 3 to 4, is IRON, WOOD or PIPE. If wood give size of pole.

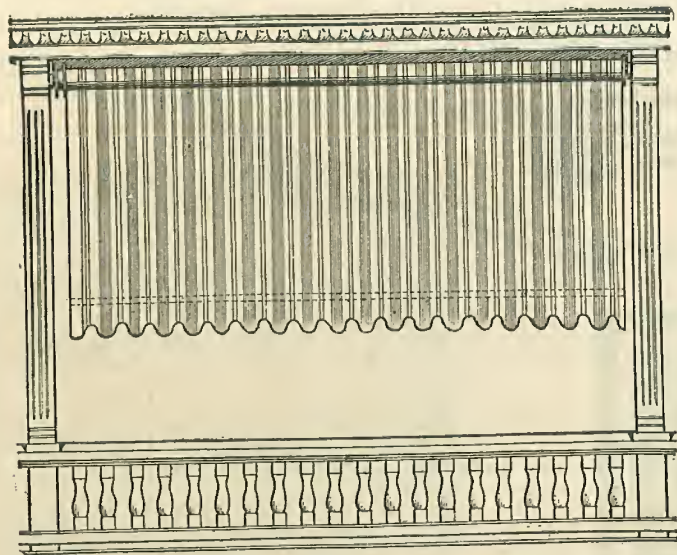

Directions for Measuring Porch and Veranda Awnings

FIRST determine the place where the joints of the frame will be fastened to the building, which should be from 7 to 8 ft. from the sidewalk, according to the height of the front (see figure 2 in diagram). You will observe that the curtain—15 in. deep—drops below that point, for which you will have to allow in clearing people's heads. Then measure from there to where top of awning can be fastened above (see figure 1 in diagram) which will be the distance from 1 to 2, or height of awning, 2 to 3, in a high building, should be the same as 1 and 2, but in a low one a little more. Then measure the width from center of column on one side to the same on the other side, which will be the distance from 3 to 4, or width of awning. If the top where the awning is to be attached projects or is back of the level, mention how much.

Below cut shows our **ANCHOR ROLLER CURTAIN** and **PORCH AND VERANDA AWNING** as used on residences, hotels, etc. They are made in plain and fancy stripes, and can be lowered any desired distance, thereby keeping out the sun at all times, and having a neat appearance.

DIRECTIONS FOR MEASURING.

Give full width of space where CURTAIN is to go. The curtain will be 4 inches narrower, as the fixtures take up 4 inches.

Give distance from top to where bottom of scallop is to be when down.

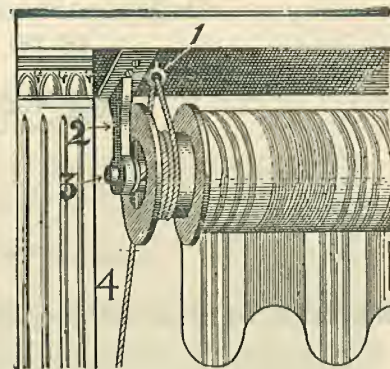

The goods will be made one foot longer, which is to be left on roller when curtain is lowered.

DIRECTIONS FOR PUTTING UP.

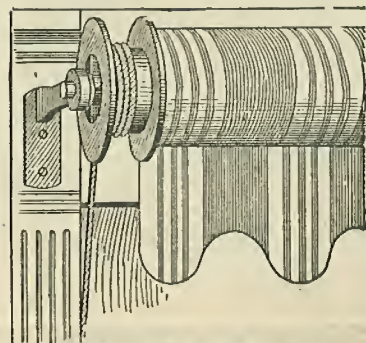

Fasten brackets as per above cuts, next wind half the rope in groove of fixture at end of roller, then run rope through screw eye which is placed at point 1, after which bring down as shown at figure 4 and fasten to cleat which should be placed within easy reach.

To raise curtain pull rope until desired height is obtained.

To lower curtain loosen rope and let it drop to point wanted.

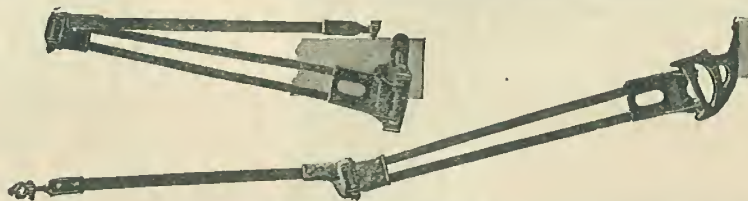

Showing Bracket Fastened to Ceiling.

Showing Bracket Fastened to Front.

AWNING ARM FOR PRISM GLASS FRONTS WHERE AWNING IS TO BE PLACED LOW DOWN ON FRONT

This arm was invented to fill an existing want. The average modern store front as constructed at present, leaves no room for slide rods or fastening for Awning arms. There is usually nothing but glass for eight or ten feet from the sidewalk up, then a transom bar and the upper part of the front prism glass. This arm fastens to the transom bar if it is wide enough, or it can be used above the prism glass if desired. If the transom bar is to be used for fastening, and is not wide enough, a fastening must be provided if an Awning is to be used on the front. For this purpose a plank, size $1\frac{1}{2} \times 6$ inches, can be used. The arm is adjustable to any slant and the adjustment cannot slip. On fronts up to 22 feet wide, we think two arms are all that is necessary. They should be placed about 4 feet from each end of the Awning and the folding part or hinge arranged to fold out to the edge of the Awning. By setting them this distance in it lessens the distance from pivot to pivot on the front rod. We find two arms will readily carry an Awning 22 feet wide, but three arms can be used if desired. Where fronts are wider than 22 feet, the arm should be placed about eight or ten feet apart to obtain the best results. These arms are made to extend 7 feet.

As there are a great many places where this arm only can be used, you no doubt will find that they fill a long-felt want.

Special attention is paid to the requirements of the profession in the manufacture of our Photo Tents. During an experience of many years, the suggestions for improvements from parties using the tents have been noted, and put into execution wherever practicable. We are, therefore, in a position to guarantee the utmost satisfaction. Our Brown Duck Tents are the height of perfection. Doors and skylights put wherever wanted in our Tents.

33 x33	6	17	146 00	166 00	186 00	209 00	232 50

Especially adapted for the lawn, the height of wall making entire space available. Awning in front making it cool and airy, but can make with regular door, if preferred. All our square hipped roof tents are roped and stayed in the best manner. Many tent manufacturers do not rope tents of this kind at all, making them almost worthless, as they will not set up in any shape, nor last any length of time.

CEMETERY TENTS

This Tent Will Protect from Sun, Rain or Snow

MADE OUT OF BROWN DUCK ONLY.

This cut represents our CEMETERY TENT hundreds of which are in use in all sections of the country.

All live and up-to-date undertakers have one or more of these tents on hand, as they bring business.

They are made of dark brown duck, and therefore are not conspicuous when put in the cemetery.

They protect your patrons from the HOT SUN in the summer, as well as the SNOW, RAIN and SLEET in the winter.

Tents are made strong and durable, no extra weight, everything being as light as possible. Quality of goods THE BEST.

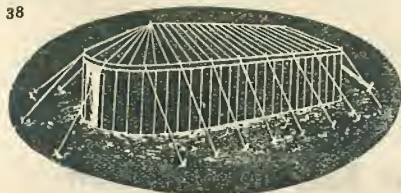

The long poles can be spliced or jointed, (if preferred) at a small additional cost.

Samples of material on application.

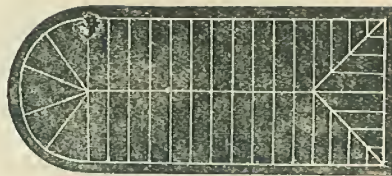

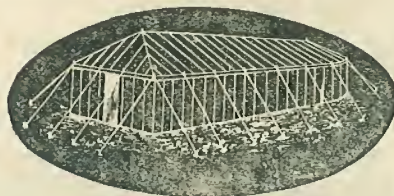

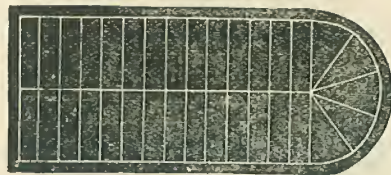

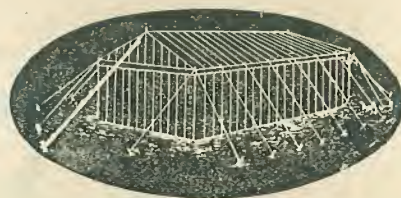

Size	Height in Center	Height at Sides	Price

24x24.....	18 ft	7 ft	70 00
30x30.....	18 ft	7 ft	96 50

Walls can be furnished for one or more sides if wanted

at 28 cents per running foot extra.

**BLACK TENTS,
BLUE TENTS,
BROWN TENTS,
KHAKI TENTS,
Red and Blue Striped Tents**

Our Solid Black, Solid Blue, Solid Brown, Solid Khaki and Red and Blue striped tents are so well known for the quality of material, excellence of workmanship, style and fit, that any one needing a tent of this kind for Moving Picture work, never finds it necessary to look further than our establishment. **PRICES ARE RIGHT** and everything entering into the construction of these tents is strictly first-class.

Tents are made either two gable ends, one round and one gable end, two round ends or any way desired as per cuts.

SIDEWALK CANOPIES

FOR RENT.

With Matting and Lights, also Dancing Cloths and Chairs for use at Weddings, Balls and Parties.

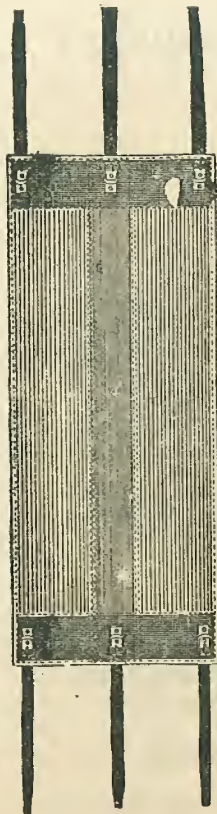

The "Anchor" Canvas Hammock

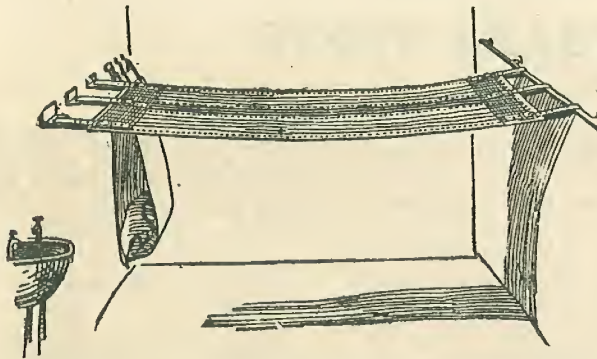

WITH DETACHABLE FASTENINGS:

There has always been a demand for a cheap, durable bed for use in Jails, Infirmaries, Prisons, Asylums, etc. Several years ago we began to manufacture our Canvas Hammock, with straps and fastenings detachable. We found that our Hammock was just what was wanted, for they are now in use in every part of the United States, and parties using them once will have no other kind. We make the best Canvas Hammock in the world, and can furnish testimonials to that effect from any state in the Union.

All Modern Jails, Infirmaries, Prisons, Asylums

Are, or should be, equipped with the "Anchor Canvas Hammock." They are made out of 20 ounce, heavy white cotton duck, well made, and stayed in center and on ends where strength is necessary, with rope sewed all around the edge. The ends are doubled over six (6) inches, with extra heavy piece of goods underneath, making three (3) parts of canvas at each end where straps are attached to hammock, and through the center of the hammock lengthways there is an extra strip of heavy canvas four (4) inches wide, sewed on with double row of stitching, so that hammock CAN NOT give in the middle. The eyelets, through which bolts pass in attaching straps to hammock are iron rings, sewed in by hand with heavy twine, and then a brass center inserted, so there is absolutely no chance for wear nor danger of eyelets tearing out. Straps are out of best selected leather fifteen (15) inches long, and fastened to hammock with nut and bolt attachment, so that they can be taken off very quickly by anyone when hammock is to be washed, thereby saving the expense of having them sewed on after washing, or if left on hammock, be ruined by boiling in hot water. Any person with a small wrench can take the straps off and put them on again in a few minutes.

Showing same in position for use, also rolled up during the day.

Takes up no surplus room.
Your bed is always made up.

When the Hammock is Rolled Up

During the day the entire cell is at the disposal of the occupant. The old style bedstead is always in position, or folded against the wall in an unsightly and unhealthy manner, and taking up room which can otherwise be utilized during the day. This hammock has nothing about it that can be used as a weapon by refractory prisoners in case of an outbreak or insurrection, and as to cleanliness, there is no place for insects to harbor.

No Bugs, No Lice, No Dirt,

will trouble you while you use our hammock, for they can be kept clean. There are thousands now in use in different institutions all over the country, as by their simplicity and lack of trouble to keep clean, they recommend themselves to everyone connected with places which have use for this style of bed.

Price of Anchor Canvas Hammocks

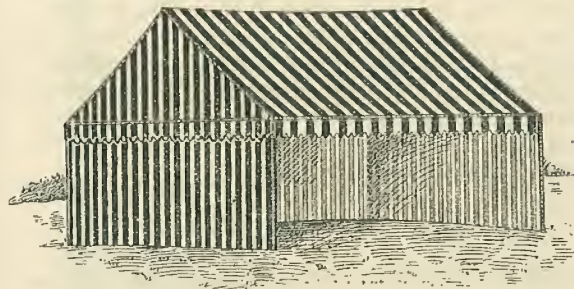

We furnish the Hammocks at \$37.00 per dozen, complete with straps, buckles and bolts. Without straps, buckles and bolts, but complete in every other way, \$23.50 per dozen. If parties prefer to have straps riveted to hammock, we will furnish them at \$33.50 per dozen, but of course straps are not detachable. Prices F. O. B. Evansville, Ind.

TERMS: Cash with order, or C. O. D. by express or freight, with privilege of examination if desired.

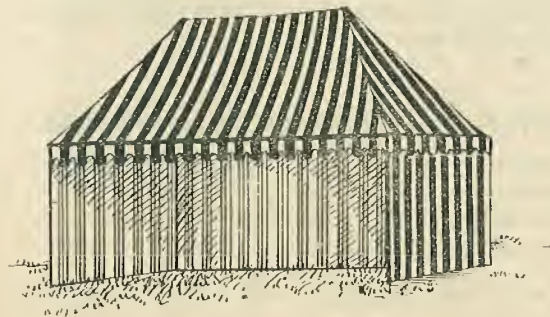

When ordering please mention length you wish hammock, as we make them from 5 ft. 6 in. to 6 ft. 6 in. long, but all are 2 ft. 4 in. wide. All hammocks over 7 ft. long at a small advance in price.

Sample corner sent on application.

FRAMES NOT FURNISHED FOR CONCESSION FRAME TENTS

Concession Tents are made of best material and have band or strengthening piece at all corners, eaves and ridge, and have 12 inch scalloped curtains all around at eave. They are hand roped at eaves and gables, and on ridge if desired; and have eyelets at eave to tie to frame and large rings in corners for storm guys. Walls are made to snap to the top of tent and are in two pieces—back and two sides in one piece, and front in one piece. They are made to either snap or lace at corners. Tents are made with sufficient pitch to throw off the water.
